Origins of Internet

Origins of Internet

Origins of Internet

Impacts of Internet

- Design of Internet
 - Is the reason for its impact?

6

Impacts of Internet

- Design of Internet
 - Supports growth and fosters innovation?

7

Impacts of Internet

- Internet is a tense place

Q Search **Bloomberg**

Cybersecurity

Cyber-Attack Hits U.S. Health Agency Amid Covid-19 Outbreak

By [Shira Stein](#) and [Jennifer Jacobs](#)
March 16, 2020, 8:37 AM EDT Updated on March 16, 2020, 4:35 PM EDT

- ▶ NSC tweet on disinformation Sunday was connected to attack
- ▶ Cyber intrusion comes as U.S. battles the coronavirus pandemic

2018: CBS THIS MORNING

8

Impacts of Internet

- Internet is a tense place

9

Impacts of Internet

- Internet is a tense place

10

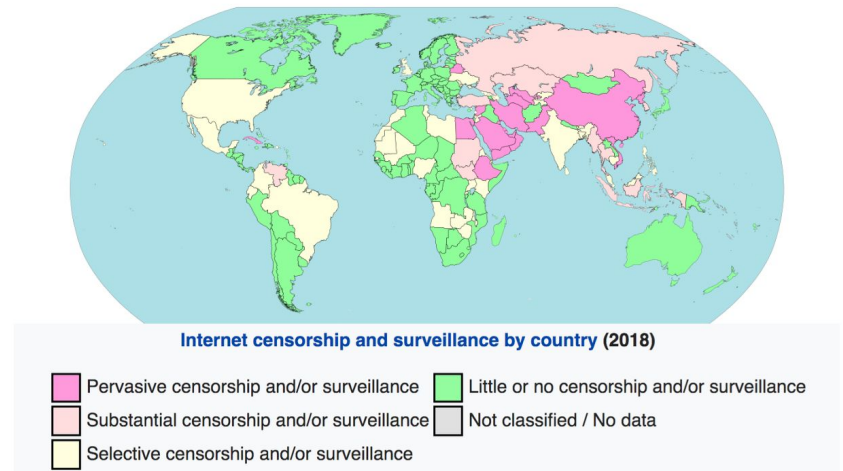

Impacts of Internet

- Design of Internet
 - Creates or exacerbates these tensions?

12

Impacts of Internet

- Internet is a tense place

11

What is Internet?

- Internet is a
 - **Publicly accessible** network of **interconnected** computer networks
 - Transmit data by **packet switching** using standard Internet Protocol
 - **Network of networks**
 - Consists of many smaller domestic/academic/business/govt networks
 - Carry various **information** and **services**

13

What is Internet?

- Best-effort packet delivery service

14

What is Internet?

- Power at edge
 - End-to-end principle
 - Communication/protocol operations should occur at endpoints
 - Whenever possible
 - Programmability
 - New network services can be added at any time, by anyone
 - With programmable end hosts
 - Eventually, end hosts became powerful and ubiquitous

15

What is Internet?

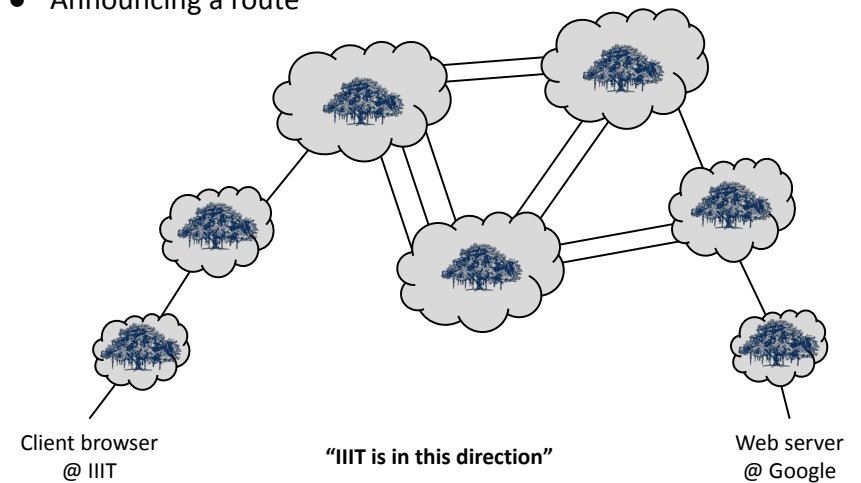

- Internet is a network of networks

16

What is Internet?

- Announcing a route

17

What is Internet?

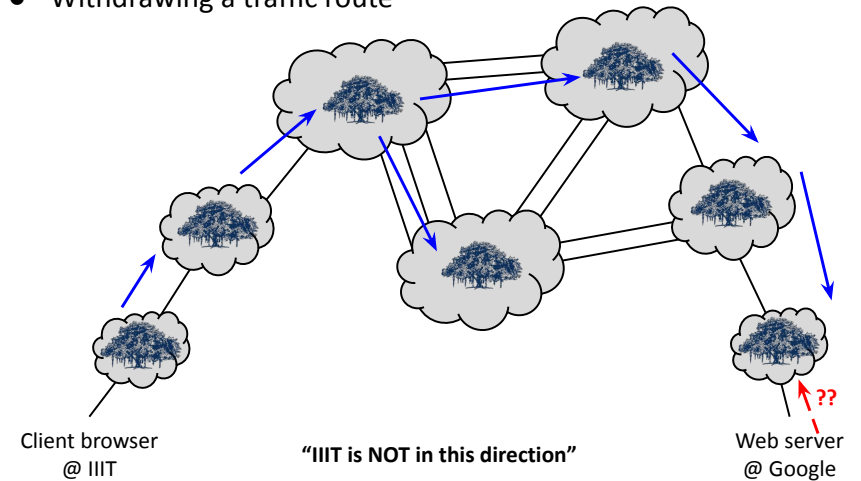

- Forwarding traffic

18

What is Internet?

- Withdrawing a traffic route

19

What is Internet?

- Withdrawing a traffic route

By James Cowie on January 27, 2011 7:56 PM

At 22:34 UTC (00:34am local time), Renesys observed the virtually simultaneous withdrawal of all routes to Egyptian networks in the Internet's global routing table. Approximately 3,500 individual BGP routes were withdrawn, leaving no valid paths by which the rest of the world could continue to exchange Internet traffic with Egypt's service providers. Virtually all of Egypt's Internet addresses are now unreachable, worldwide.

20

Key concepts in networking

- Abstraction through protocol layering
 - Layers partition system
 - Each layer **solely** relies on services from layer below
 - Each layer **solely** exports services to layer above
 - Interface between layers defines interaction
 - Hides implementation details
 - Layers can change without disturbing other layers

21

Key concepts in networking

- Internet Protocol (IP) suite
 - Thin Network layer facilitates interoperability

work together seamlessly

22

Key concepts in networking

- Application: HyperText Transfer Protocol

```
GET /path/to/resource/ HTTP/1.1
Host: www.cs.xyz.edu
User-Agent: Mozilla/5.0
CRLF
```

Request

```
HTTP/1.1 200 OK
Date: Wed, 11 Aug 2021 09:28:28 GMT
Server: Apache/2.4.41
Last-Modified: Fri, 06 Aug 2021 04:46:59 GMT
Content-Length: 23
CRLF
Site under construction
```

Response

23

Key concepts in networking

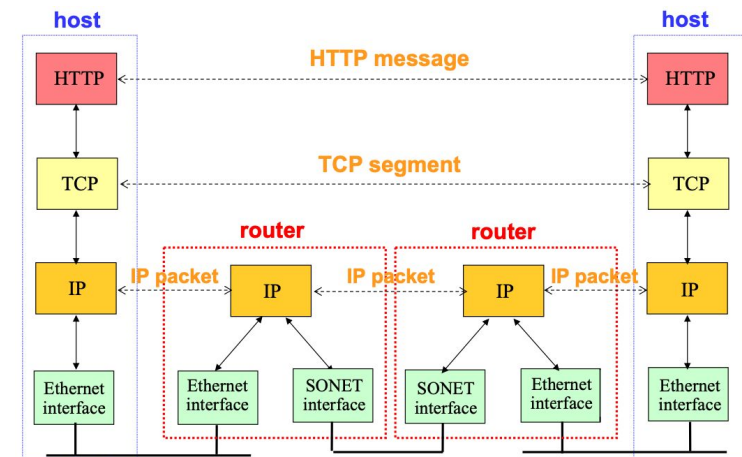

- Layer encapsulation in HTTP

24

Key concepts in networking

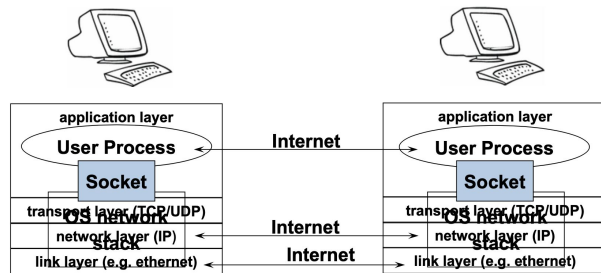

- End hosts vs router

25

Key concepts in networking

- Socket and process communication
 - Interface that OS provides to its networking subsystem

26

Key concepts in networking

- Socket and process communication
 - Receiving host
 - Destination **address** that uniquely identifies host
 - IP address: 32-bit ("1.2.3.4")
 - Receiving socket
 - Host may be running many different processes
 - Destination **port** that uniquely identifies socket
 - Port number: 16-bit ("80")

27

Key concepts in networking

- Central concepts
 - Naming
 - What to call computers, services, protocols, etc.
 - Layering
 - Abstraction is key to managing complexity
 - Protocols
 - Speaking same language
 - Syntax and semantics
 - Resource allocation
 - Dividing scarce resources among competing parties
 - Memory, link bandwidth, wireless spectrum, paths

28

Key concepts in networking

- Uniform Resource Identifier (URI)
 - Unique sequence of characters
 - Identifies a logical or physical resource used by web
 - Real-world objects (e.g., people, places)
 - Information resources (e.g., webpages, books)
 - Syntax
 - URI = scheme:[//authority]path[?query][#fragment]
 - authority = [userinfo@]host[:port]

29

Key concepts in networking

- Uniform Resource Name (URN)
 - Type of URI
 - Provide only a unique name
 - Without means of locating/retrieving resource/information
 - URN identifies an item, e.g., ISBN of a book

30

Key concepts in networking

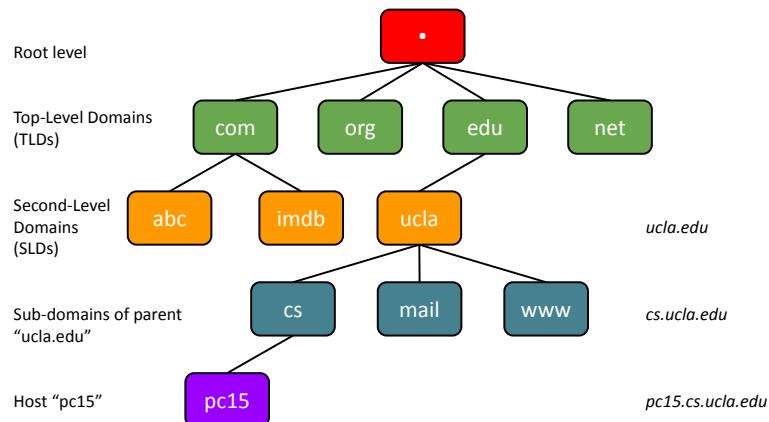

- Uniform Resource Locator (URL)
 - Type of URI
 - Provide means of locating/retrieving resources/information
 - URL provides a method for finding resources/information, e.g., web

31

Key concepts in networking

- Domain Name System (DNS) 53
 - Serves as phone book for Internet
 - Translate human-friendly computer hostnames into IP addresses

32

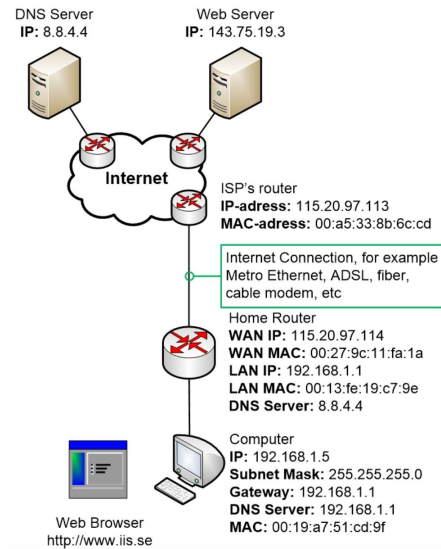

Key concepts in networking

- Dynamic Host Configuration Protocol (DHCP)
 - A server service that dynamically assigns, or leases, IP addresses and related IP information to network clients
 - Each client gets
 - Unique IP address
 - Subnet mask
 - Default gateways
 - Domain Name System (DNS) server addresses

33

How does Internet work?

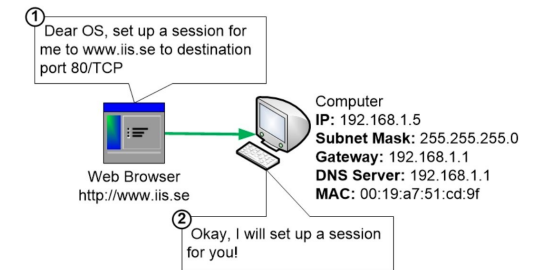

0. Sample setup

34

How does Internet work?

1. Computer wants to send traffic

35

How does Internet work?

2. DNS

a. DNS cache

36

How does Internet work?

2. DNS

b. Putting a DNS query together

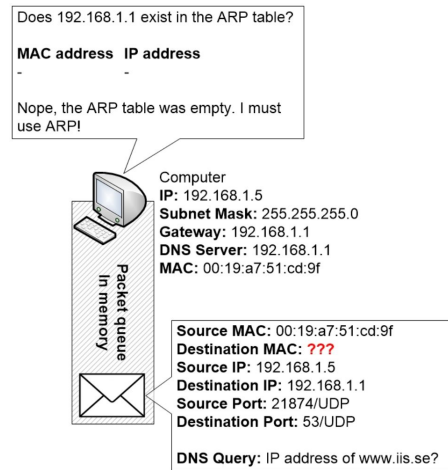

37

How does Internet work?

2. DNS

c. Check ARP table for a valid MAC address

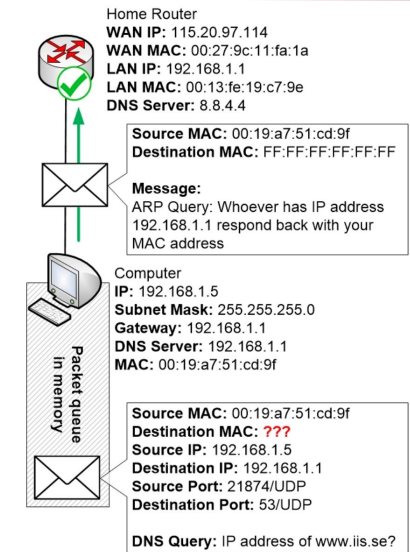

38

How does Internet work?

2. DNS

d. ARP request to network

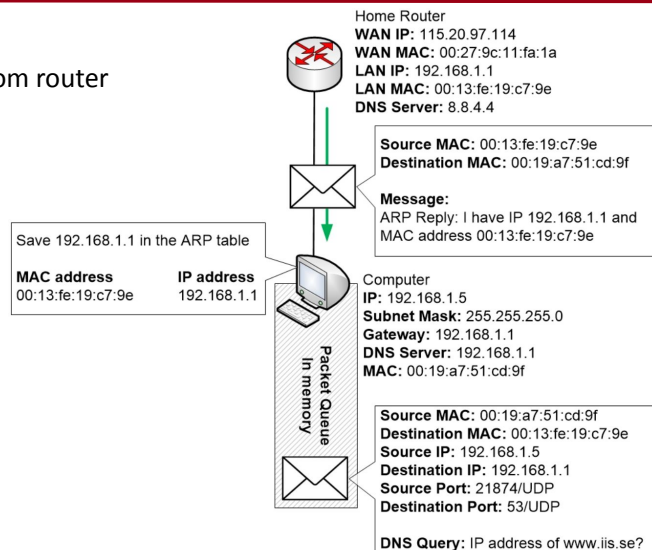

39

How does Internet work?

2. DNS

e. ARP reply from router

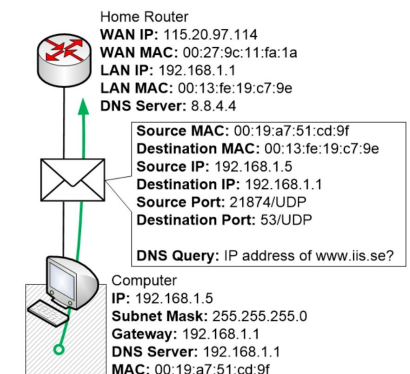

40

How does Internet work?

2. DNS

f. Send off DNS query

41

How does Internet work?

2. DNS

- g. Home router checks its DNS cache

42

How does Internet work?

2. DNS

- h. Home router prepares and sends away its DNS query

43

How does Internet work?

2. DNS

- i. DNS query is routed over Internet

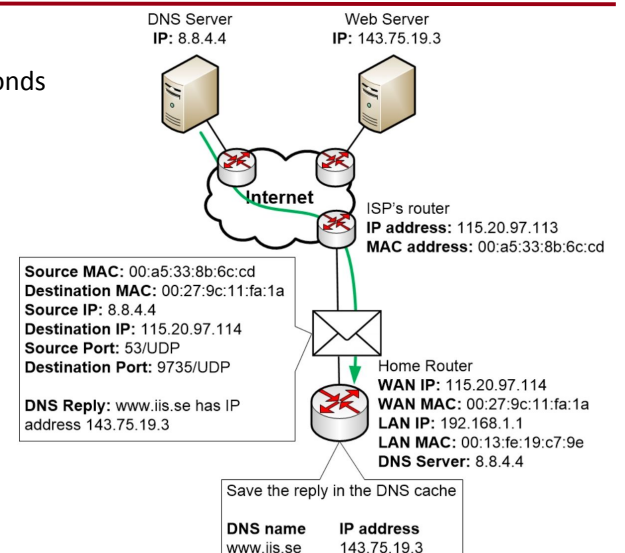

44

How does Internet work?

2. DNS

- j. DNS server responds

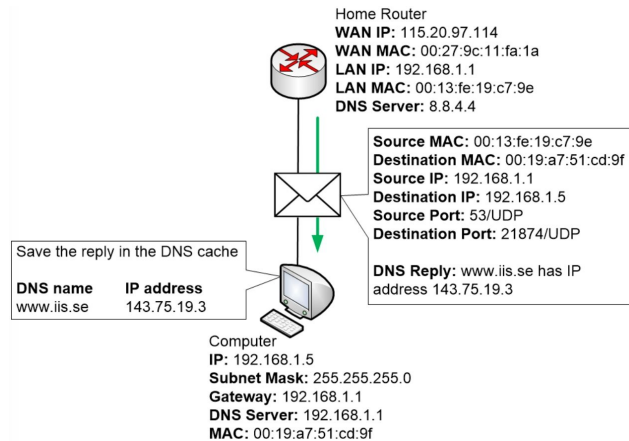

45

How does Internet work?

2. DNS

- k. Home router can send a DNS reply to computer

46

How does Internet work?

3. Computer sets up a session to www.iis.se

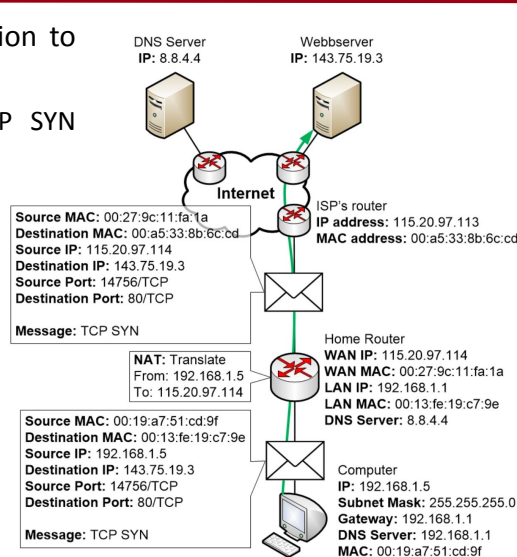

- Initialize TCP 3-way Handshake

47

How does Internet work?

3. Computer sets up a session to www.iis.se

- a. Computer sends a TCP SYN message

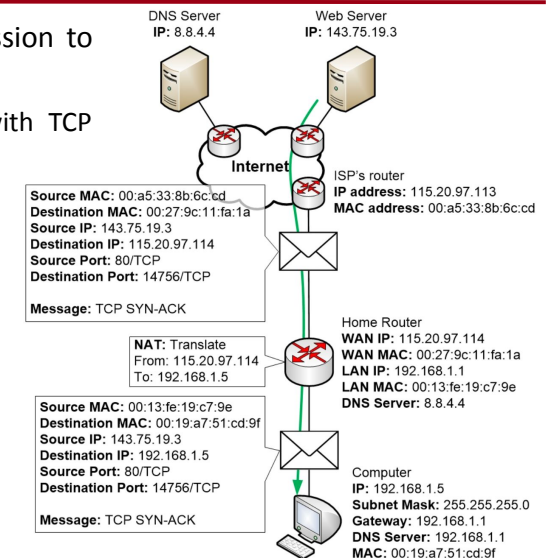

48

How does Internet work?

3. Computer sets up a session to www.iis.se

- b. Web server replies with TCP SYN-ACK

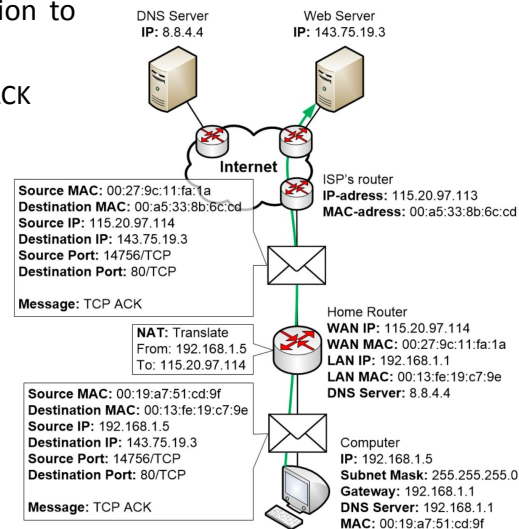

49

How does Internet work?

3. Computer sets up a session to www.iis.se

c. Computer sends a TCP ACK

50

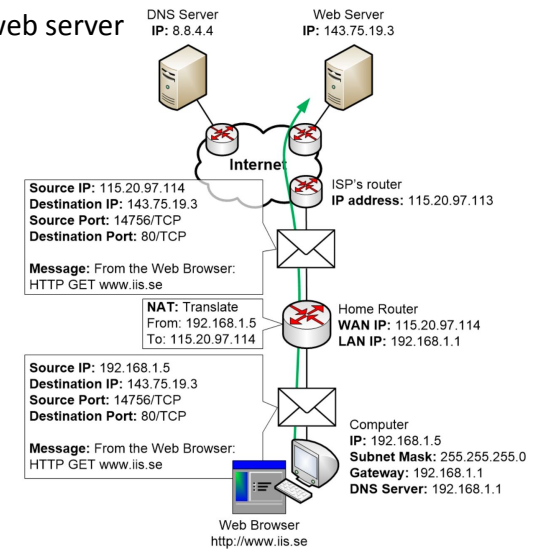

Summary and conclusions

- Growth/innovation vs create/exacerbate tensions
 - Does Internet design prevent misuse?
 - Which of following is true
 - (A) When connecting to network, individual endpoints can only use addresses given to them
 - (B) Individual endpoints can “spoof” any IP address

52

How does Internet work?

4. Web browser talks with web server

51

Summary and conclusions

- Growth/innovation vs create/exacerbate tensions
 - Central authority IANA assigns unique IP address blocks to networks
 - Which of following is true
 - (A) Networks can only announce assigned addresses
 - (B) Networks can spoof any address

53

Summary and conclusions

- Growth/innovation vs create/exacerbate tensions
 - Does Internet provide reliable packet delivery?
 - Which of following is true
 - (A) Yes, it's necessary for protocols like HTTP that require in-order streams
 - (B) No, packets can be arbitrarily dropped or reordered

Thank you!
